

# NAVIGATE FROM ONE POINT ON THE GROUND TO ANOTHER POINT WHILE DISMOUNTED

**CONDITIONS:** Given a local 1:25,000 scale topographic map, a coordinate scale and protractor, a lensatic compass, and a requirement sheet with the 8 digit coordinates of a start point and four intermediate points.

**STANDARDS:** Within three (3) hours negotiate the course correctly locating a minimum of three (3) of the four (4) intermediate points and then return your answer sheet to the test administrator at the start points.

**INSTRUCTIONS TO THE STUDENT:** ALL WORK MUST BE YOUR OWN. You may not receive assistance from anyone. You may not make a record of your answers, the grid coordinates, or the land navigation point numbers anywhere but on your official answer sheet and map. Plot each of your points on the map and double check them, then choose the best route which leads you to each point. Next, determine the grid azimuth to each point. Convert the grid azimuth to a magnetic azimuth and navigate to your point using your compass and your particular pace count. Observe all boundaries and safety requirements established by local SOP.

**SAFETY TIPS:** Know the boundaries of the course. If you become disoriented or lost, move downhill until you find a road; stay there and someone will find you. If you are injured while on the course and are unable to return to the start points, notify other course participants. The first responder will stay with the injured Soldier. The next responder will fetch medical support.
